

CS CS4500 Weekly Management Report
Cool Team Name

Accomplishments

We got a checkout machine from the CS department and now can begin loading it with software and files for our project. We set up the logging system using WordPress and each of us have accounts and can log our activity. We started our software project history as well. We also did our Project Plan. Also did more reading and messing around with CrystalSpace. We all participated in all of these activities.

Goals & Priorities

Get these documentation details out of the way and begin understanding CrystalSpace more and trying out own sample programs. Get Perforce our code-sharing software up and running. Also still want a basic walking demo with CEL and Cal3D.

Needs

None at this time.
